

KWIK SLEEVE-Round

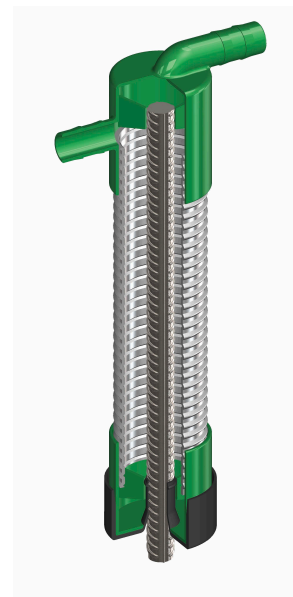

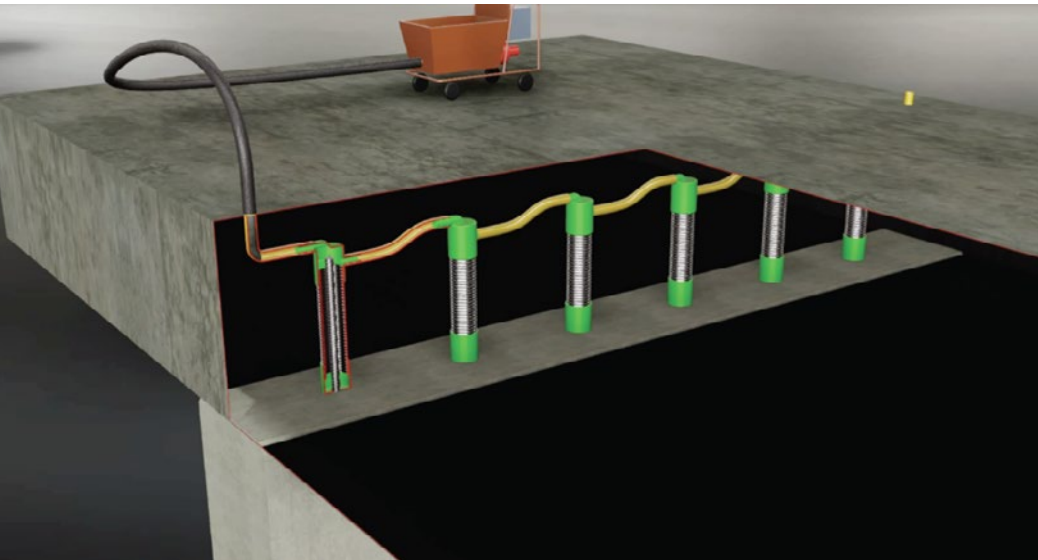

Patent Pending
Aust. Design Application. No. 201812346
Aust. Design Application. No. 201812348

KWIK Sleeve allows for movement of the slab for Stressing / Drying shrinkage

The KWIK Sleeve allows for grouting after PT stressing locking the elements together.

KWIK Sleeve size allows for easy handling on site and installation before or after steel placement.

Kwik Sleeve is grouted after post tensioning stressing is complete, using standard PT Grout. (ref to installation guide)

Patent Pending

KEY BENEFITS

- Can be installed before or after steel placement is complete
- Corrugated metal duct, ensures maximum bonding between slab and bar
- Quick installation
- Can be looped for grouting purposes
- No leakage during grouting
- Cost effective solution
- No on site assembly required
